**OATS - CERTIFIED**

**DANE**

**LICENSED VARIETY**

Dane is an early maturing, high yielding oat developed by workers at the University of Wisconsin-Madison and released in 1990. A unique feature of Dane is its high grain yields in spite of its earliness. Dane is very early, heading 3-4 days earlier than Ogle.

Dane has large, yellow kernels that have a high groat percentage. It has above average test weight and groat protein percentage. Straw strength is good. Dane has intermediate resistance to crown (leaf) rust and has shown some tolerance to stem rust and barley yellow dwarf virus.

Dane, is a U.S. Plant Protected Variety. Seed of Dane can legally be produced and labeled for sale only as certified seed by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.
