**OATS - CERTIFIED**

**PVP**

**DANE**

**LICENSED VARIETY**

Dane is an early maturing, high yielding oat developed by workers at the University of Wisconsin-Madison and released in 1990. A unique feature of Dane is its high grain yields in spite of its earliness. Dane is very early, heading 3-4 days earlier than Ogle.

Dane has large, yellow kernels that have a high groat percentage. It has above average test weight and groat protein percentage. Straw strength is good. Dane has intermediate resistance to crown (leaf) rust and has shown some tolerance to stem rust and barley yellow dwarf virus.

Dane, is a U.S. Plant Protected Variety. Seed of Dane can legally be produced and labeled for sale only as certified seed by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**DRUMLIN****LICENSED VARIETY**

Drumlin Oats is a mid-late high yielding oat developed at the University of Wisconsin-Madison. Drumlin has very good crown rust resistance and very good Barley Yellow Dwarf Virus tolerance. It is equal to Vista in maturity and its height is similar to Gem. Lodging is higher than Gem and Vista. Released in 2003, Drumlin oats is exclusively licensed by Wisconsin Alumni Research Foundation (WARF) to Wisconsin Crop Improvement (WCIA).

Drumlin is a U.S. Plant Protected Variety (PVPA 1994). Seed of Drumlin can legally be produced and labeled for sale only by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**ESKER****LICENSED VARIETY**

Esker is a mid-season oat which has had consistently high grain yields. Test weights are similar to those of Gem, while heading date is about 1 day later than Moraine, and just slightly earlier than Ogle. Plant height is about an inch shorter than Gem and Drumlin. Lodging is less than Gem and Vista, but more than Belle and Dane. BYDV tolerance is comparable to that of Ogle. Crown rust resistance is very good. Released in 2004, Esker oats is exclusively licensed by Wisconsin Alumni Research Foundation (WARF) to Wisconsin Crop Improvement (WCIA).

Esker is a U.S. Plant Protected Variety (PVPA 1994). Seed of Esker can legally be produced and labeled for sale only as by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**PVP****FORAGEPLUS****LICENSED VARIETY**

ForagePlus oats was released by the University of Wisconsin-Madison in 2001. ForagePlus is a tall, very late maturity oat that heads 5 to 7 days later than Ensiler and Belle. It has exceptionally high forage yields. Forage Plus can be harvested over a longer than normal time period because it has excellent yields, even with early harvest. ForagePlus has good grain yields, yellow kernels and excellent resistance to crown rust.

ForagePlus is a U.S. Plant Protected Variety (PVPA 1994). Seed of ForagePlus can be legally produced and labeled for sale by members of Pro Seed Genetics who have been licensed by the Wisconsin Crop Improvement Association.

**PVP****GEM****LICENSED VARIETY**

Gem is a mid-season oat released by the University of Wisconsin-Madison in 1996. In Wisconsin statewide tests, Gem has had high grain yields. Gem heads about the same time as Prairie; however, due to its longer grain filling period, Gem reaches maturity at a similar time as Belle. Gem is about the same height as Belle. Gem has excellent resistance to crown rust and also good tolerance to barley yellow dwarf virus. Gem has yellow kernels with good test weight, groat percentage, and groat protein percentage.

Gem is a U.S. Plant Protected Variety (PVPA 1994). Seed of Gem can legally be produced and labeled for sale only as Certified seed by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**KAME****LICENSED VARIETY**

Kame is an early high yielding oat developed at the University of Wisconsin-Madison. Kame has crown rust resistance. It is about 2 days later than Dane and similar in height to Dane. Kame has significantly higher yields and better standability than Dane and Moraine. Released in 2005, Kame oats is exclusively licensed by Wisconsin Alumni Research Foundation (WARF) to Wisconsin Crop Improvement (WCIA).

Kame is a U.S. Plant Protected Variety (PVPA 1994). Seed of Kame can legally be produced and labeled for sale only by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**MORaine****LICENSED VARIETY**

Moraine is a yellow kernel, early maturing, high yielding oat developed at the University of Wisconsin-Madison. Moraine heads approximately two days later than Dane and is equal in height to Gem. Moraine has higher yields and greater bushel weight than Dane. Moraine has very good leaf rust and barley yellow dwarf virus resistance. Released in 2001, Moraine oats is exclusively licensed by Wisconsin Alumni Research Foundation (WARF) to Wisconsin Crop Improvement Association (WCIA).

Moraine is a U.S. Plant Protected Variety (PVPA 1994). Seed of Moraine can legally be produced and labeled for sale only by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**OGLE**

Ogle is a medium maturing oat variety developed at the University of Illinois. Ogle heads about 2 days earlier than Hazel and 3 to 4 days later than Dane. Ogle is 2 inches taller than Hazel,

and has very good straw strength. It produces high grain yields in the absence of leaf rust. Ogle is susceptible to both leaf rust and smut, but possesses tolerance to red leaf virus. It has slightly below-average test weight, and grain color is yellow.

**PVP****RICHARD****LICENSED VARIETY**

Richard is a high yielding mid-season variety released by the Minnesota Agricultural Experiment Station in 2000. It is similar in maturity to Jerry with superior yield performance. It is resistant to smut, moderately resistant to crown rust and has good tolerance to red leaf. Richard is a yellow seeded variety with high test weight.

Richard is a U.S. Plant Protected Variety (PVPA 1994). Seed of this variety can only be sold as a class of certified seed. A license is required for seed production.

**PVP****VISTA****LICENSED VARIETY**

Vista is a mid-late season oat variety released by the University of Wisconsin-Madison in 1999. Vista has consistently shown high grain yields in Wisconsin statewide tests with seed test weights similar to Belle. Vista heads two days later than Ogle. Plant height is similar to Troy with lodging similar to Gem. Vista has excellent crown rust resistance and tolerance to barley yellow dwarf virus.

Vista is a U.S. Plant Protected Variety (PVPA 1994). Seed of Vista can legally be produced and labeled for sale only by growers who have been licensed by the Wisconsin Crop Improvement Association or its legal agent.

**RYE, WINTER - CERTIFIED****HANCOCK**

Hancock is a high yielding winter rye developed and released by the University of Wisconsin-Madison in 1979. It is intermediate in plant height, i.e., shorter than typical tall-strawed varieties. Hancock is winter hardy and plants stand well. In Wisconsin, Hancock matures in mid-July.

**RYE, WINTER-CERTIFIED****CONT.—HANCOCK**

Kernels wheat-like in color predominate with the remainder ranging in color from wheat-like to light emerald.

**SPOONER****LICENSED VARIETY**

Spooner is a high yielding winter rye released by the University of Wisconsin-Madison in 1992. Grain yields and test weight exceed those of Hancock. Spooner heads about one day earlier than Hancock and has excellent winter hardiness. Spooner is tall, averaging about 3 inches taller than Hancock, but lodging less than Hancock. Kernels, wheat-like in color predominate.

Spooner is a U.S. Plant Protected Variety and can only be sold as a class of certified seed..
