

OATS - CERTIFIED

ANTIGO

LICENSED VARIETY

Antigo is an early maturity variety released from the University of Wisconsin-Madison in 2017. Antigo has excellent test weight and high yields. Antigo heads out one day later than Badger and two days earlier than Esker. Antigo is two inches taller than Badger and two inches shorter than Esker and Ron. Lodging is similar to Esker and Natty and less than Drumlin and Vista. It is modestly resistant to crown rust. Antigo has high dehulling efficiency with average groat percentage while high in protein and oil.

Antigo is a U.S. Plant Protected Variety (PVPA 1994). Seed of Antigo can legally be produced and labeled for sale only by growers who have been licensed by Wisconsin Crop Improvement or its legal agent.

BADGER

LICENSED VARIETY

Badger is an early season oat developed at the University of Wisconsin and released in 2010. It has a heading date that is one day earlier than Kame. Badger has consistently high grain yields and excellent test weight. Lodging percentage is about equal to Vista. Badger is one inch shorter than Kame. Badger has good barley yellow dwarf virus tolerance and very good crown rust resistance.

Badger is a U.S. Plant Protected Variety (PVPA 1994). Seed of Badger can legally be produced and labeled for sale only by growers who have been licensed by Wisconsin Crop Improvement or its legal agent.

ESKER2020

LICENSED VARIETY

Esker2020 was released by the University of Wisconsin-Madison in 2019. It is a high yielding oat line with performance in the top 10% for yield in the Midwest. It has intermediate flowering time with heading date similar to Esker and Horsepower, 2 days later than Antigo, and 1 day earlier than BetaGene™. Lodging is similar to Esker and less than Drumlin and Vista. Esker2020 is superior to Esker in grain yield, test weight and disease resistance.

Esker2020 is a U.S. Plant Protected Variety. Seed of Esker2020 can legally be produced and labeled for sale only by growers who have been licensed by Wisconsin Crop Improvement or its legal agent.

HAYDEN

LICENSED VARIETY

Hayden is a medium-late maturity variety released by the South Dakota Agricultural Experiment Station in 2015. Hayden has high yield potential with high test weight. Hayden heads out 4 days later than Shelby 427. Hayden is white-hulled with plant height 2 inches taller than Shelby 427 and 4 inches shorter than Goliath. It has better lodging resistance than Goliath and similar to Shelby 427. Hayden is resistant to smut and moderately resistant to BYDV while moderately susceptible to crown rust and stem rust.

Hayden is a U.S. Plant Protected Variety (PVPA 1994), Title V. A license is required for seed production.

Oat Varieties

MINK**LICENSED VARIETY**

Mink is a high yielding oat line with above average performance for yield in the Midwest. It has a medium to high test weight, being in the top 25% with a three-year average above 38 lbs/bu in most locations evaluated in the WI State Trials. Mink has an intermediate flowering time with an average plant height of 27 inches. It is in the top of lines with lodging less than average. It is resistant to crown rust and showed medium to low crown rust infection levels in most trials. Mink is most similar to the previously existing cultivar Esker with similar heading date and plant characteristics such as dehulling efficiency. However, Mink is superior to Esker in grain yield, test weight, lodging, and disease resistance.

**RUSHMORE****LICENSED VARIETY**

Rushmore oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2019. The line was tested as SD140515 with the pedigree of SD80015/SD0070110/SD060130. Rushmore is a medium-late maturing line, heading about 1 day earlier than Hayden. Rushmore is similar in height to Hayden with better lodging resistance. Rushmore has high yield potential and good test weight. Rushmore is resistant to moderately resistant to crown rust. The variety is moderately resistant to BYDV and smut.
