

RYE, WINTER - CERTIFIED

HANCOCK

Hancock is a high yielding winter rye developed and released by the University of Wisconsin-Madison in 1979. It is intermediate in plant height, i.e., shorter than typical tall-strawed varieties. Hancock is winter hardy and plants stand well. In Wisconsin, Hancock matures in mid-July.

Kernels wheat-like in color predominate with the remainder ranging in color from wheat-like to light emerald.

SPOONER

LICENSED VARIETY

Spooner is a high yielding winter rye developed at the University of Wisconsin-Madison and released in 1992. Grain yields and test weight exceed those of Hancock. Spooner heads about one day earlier than Hancock and has excellent winter hardiness. Spooner is tall, averaging about three inches taller than Hancock, but lodging less than Hancock. Kernels wheat-like in color predominate. Spooner is a U.S. Plant Protected Variety. Seed of Spooner can legally be produced and labeled for sale only as certified seed by WCIA licensed growers.
